High Performance Coating Systems

CASE STUDY

A DECADES OLD GARAGE GETS NEW LIFE

BACKGROUND:

A residential garage in the midwest had withstood more than 50 years of varying weather conditions, however, over time, surface cracks and holes had developed in the concrete floor. The homeowner was looking for a fast and cost-effective way to repair the damaged areas.

SOLUTION:

A Hawk resurfacing professional used the StoneTuff™ Concrete Repair System to patch the cracks and holes in the floor. After grinding and cleaning the floor, the StoneTuff™ Concrete Floor Coating System with decorative chips was applied.

RESULTS:

After 24 hours, the satisfied homeowner was able to park his vehicle on the garage floor. The floor's imperfections and repairs have been completely hidden, and the original 50-year old concrete slab is now resistant to chemicals and hot tire pick-up for years to come.
